0 / 100 MBs

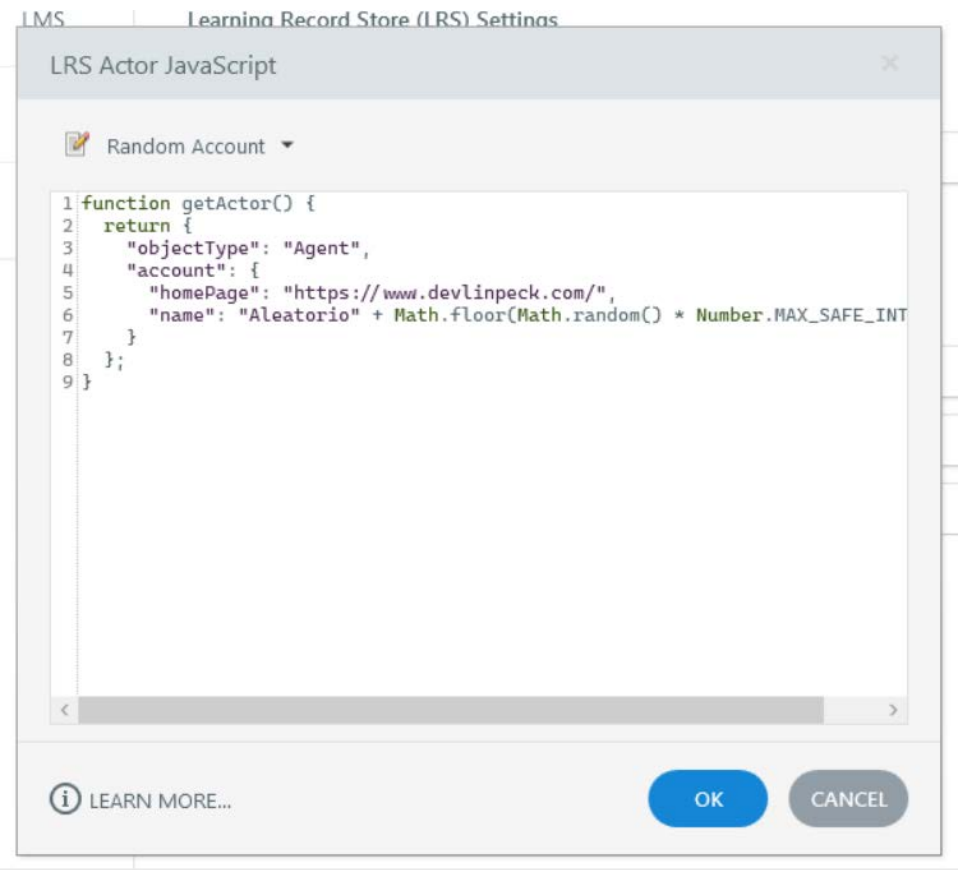

Accessing LRS endpoints with an Access Key:

The screenshot shows the Veracity Learning Testing Storyline dashboard. The URL in the browser is <https://lrs.io/ui/lrs/storytest/>. The dashboard includes a sidebar with navigation links: Testing Storyline Home, Activity Explorer, Analytics, xAPI Data, Management, Learner Portal, Tools, and Help. The main content area displays the 'Testing Storyline' title and the xAPI Endpoint: <https://storytest.lrs.io/xapi/>. A red box highlights the '1 Access Keys' status, indicating that user accounts are set up to access the LRS. Below this, there are sections for 'Free Tier' (free service with storage and rate limits), 'Active' (LRS is online and accepting statements), 'Storage Used' (0 out of 100 megabytes), and 'API Calls Used' (1 out of 10,000 API calls today). A summary section shows 14 Statements, 1 States, 0 Attachments, 2 Log Entries, 1 Agents, and 6 Activities. A green button labeled 'Generate Statements' is at the bottom.

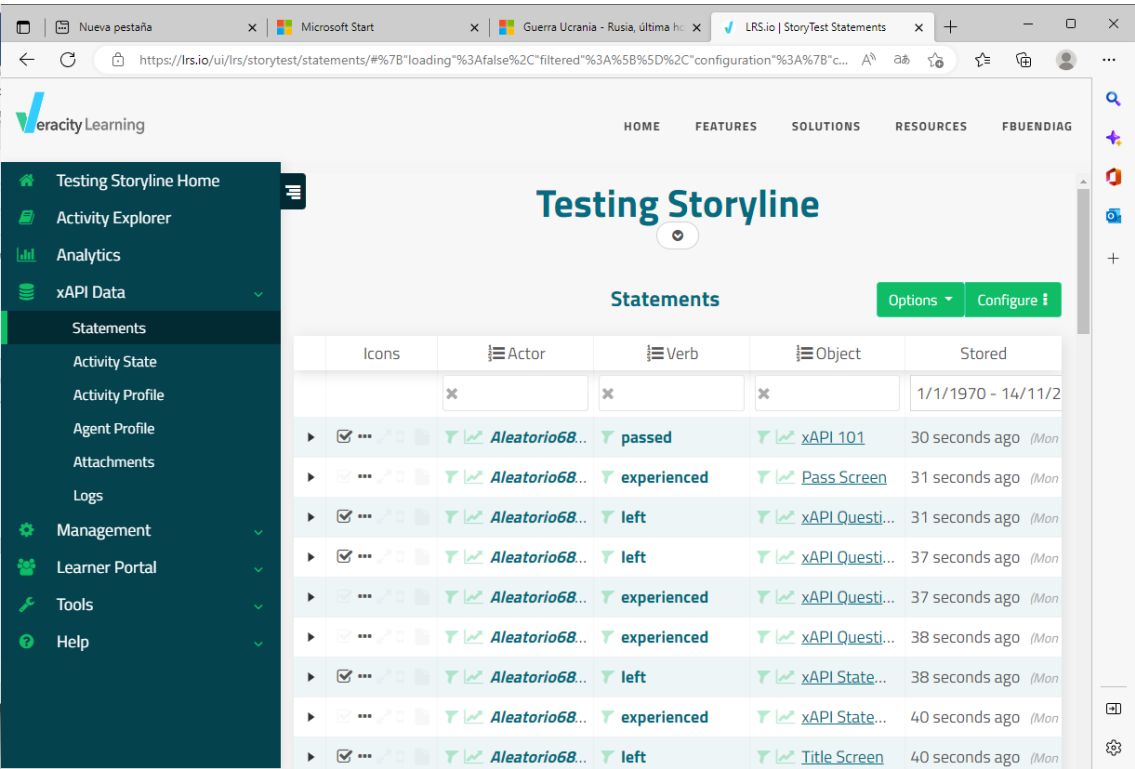

Use of LRS in Articulate Storyline 360:

The screenshot shows the 'Reporting and Tracking Options' dialog box in Articulate Storyline 360. The 'LRS' tab is selected. The 'Learning Record Store (LRS) Settings' section includes a checked box for 'Report to an external LRS'. The 'Activity ID' is set to 'urn:articulate:storyline:6auKeS37xRy'. The 'LRS Configuration' section has 'Manual' selected under 'Supplied at launch'. The 'LRS Endpoint' is 'https://storytest.lrs.io/xapi/'. The 'Key' is 'user' and the 'Secret' is masked with dots. A 'TEST SETTINGS' button is present, and a status indicator shows 'Connected to LRS'. The 'Actor' section has 'JavaScript' selected under 'Supplied via launch URL'. At the bottom, there is a 'LEARN MORE...' link, 'OK', and 'CANCEL' buttons.

Upload a SCORM, AICC, xAPI or cmi5 course

Import to a specific App: Prueba 2Sec

Specify a Course Id for import (optional):

Course Ids must be unique per application. Using an existing course Id will create a new course version.

Prueba2Sec.zip Browse

Import Course

To import a course package into SCORM Cloud, it needs to be zipped up (.zip) and needs to be either a SCORM, AICC or xAPI course package.

A SCORM package needs to have a imsmanifest.xml file which describes the course and its content.

A xAPI package needs to have a tincan.xml file and needs to send xAPI statements to the SCORM Cloud Learning Record Store. [Click here](#) to learn more about xAPI.

What is SCORM?

SCORM is a set of technical standards for e-learning software products.

SCORM tells programmers how to write their code so that it can "play well" with other e-learning software.

Specifically, SCORM governs how online learning content and Learning Management Systems (LMSs) communicate with each other. SCORM does not speak to instructional design or any other pedagogical concern, it is purely a technical standard.
